To Whom It May Concern:

R&C Engineering was the Consultant for a large garage restoration project (220 Eglinton Avenue East, Toronto) completed by Heritage Restoration Inc (HRI), in 2016. The \$1M project included several bays of garage roof slab replacement, and re-waterproofing of the entire slab. The project was at an occupied highrise residential building.

Heritage worked in a very professional manner with strict adherence to:

- Proper safety protocols
- Contract Specifications
- Construction schedule
- Overall project budget

Based on this successful project, we recommend Heritage for structural restoration projects.
